Education

Maynooth University Kildare, Ireland
B.Sc. in Computer Science & Software Engineering - 2:1 *Sep. 2021 – Sep. 2025*

Experience

Associate Consultant June 2026 – Present
Version 1 *Dublin, Ireland*

- Develop Angular, Java and Spring Boot features for the Department of Agriculture, Food and the Marine
- Build front-end components and maintain the APIs and services behind them
- Take part in code reviews and sprints with developers, business analysts and stakeholders

Software Engineer Intern April 2024 – July 2025
AQ Metrics Limited *Maynooth, Kildare, Ireland*

- Built front-end features in Angular and TypeScript to customer specifications
- Fixed bugs across the stack, from UI layout issues to broken front-end and back-end integration
- Worked in Scrum with daily stand-ups, tracking work in Jira and code in Git

Projects

Mealwright | *Python, FastAPI, OR-Tools, PostgreSQL, Next.js, TypeScript* Oct. 2026 – Present

- Built a meal planner that plans a week around a user's calories, budget, allergies and pantry, with barcode and receipt intake over a 200,000-product food database
- A constraint solver (CP-SAT) makes the plans instead of an LLM, and an independent validator checks each one: 0 safety violations across 200 plans, and 27% of the pantry used against 14% for a greedy baseline
- Deployed at no cost on Vercel, Render, Neon and Upstash after a security review (SSRF protection, rate limits, token handling); tuned the solver so a 0.1-CPU server plans as well as paid hosting
- Leveraged agentic coding for efficient development and testing while architecture, design and evaluation remained developer-led

Muscles Made Easy | *Angular, TypeScript, GitLab, Firebase* Oct. 2024 – March 2025

- Web app for fitness enthusiasts of all levels to discover exercises, build a workout plan and track their progress
- Final-year capstone project: sole developer, delivered end to end under tight deadlines
- Single-page application in Angular and TypeScript, with a Firebase NoSQL database and Firebase hosting

MU Demonstrator Allocation System | *Python Flask, Docker, GitLab* Feb. 2024 – April 2024

- Contributed to a major overhaul of the university's Demonstrator Allocation System with Flask and Docker
- First experience of Scrum, with daily stand-ups and retrospectives

Certifications

Microsoft Certified: Azure Fundamentals (AZ-900) July 2026

Technical Skills

Languages: TypeScript, Java, Python, Go, C/C++, SQL, JavaScript, HTML/CSS
Frameworks & Libraries: Angular, Spring Boot, React, Next.js, Node.js, FastAPI, Flask, OR-Tools, Material-UI, NumPy, Matplotlib
Databases: PostgreSQL, Redis, Firebase
Testing: pytest, Vitest, Playwright
Developer Tools: Git, Docker, Azure, AWS, Jira, Postman, Figma, VS Code
